Car parts videos / Cheatsheet

Shotcraft · 2026-09-22 · https://shotcraft.video/prompts/car-parts-video-prompts/

Original starting points, not tested generation results. Adapt them to your model and inspect the output.

Plan before generating

Lock product references, brand materials and colours, camera action, start/end states and the destination crop. Choose native audio only when supported; otherwise script a separate voiceover. Add exact titles and logos in post.

A prompt to adapt

Using the supplied photograph of the actual car part as a product reference, create a restrained studio product film. Frame the complete component in a three-quarter view on a matte grey bench. Make a slow, shallow camera push toward its identifying face. Broad side light describes the contours and gentle fill keeps recesses readable. Keep the original material colour, visible markings and surface finish consistent. End in a still, clear composition with space beside the part for editor-added information.

Sequence

Identify: Hold the complete silhouette before cutting closer.

Inspect: Match the interface location to the preceding view.

Confirm contents: Finish on a readable, stable arrangement.

Before accepting a take

Check product geometry and condition, hands and contact, reference identity, light and reflections, neighbouring joins, intelligible audio and crop. An attractive generated result is not proof of performance.
