Cooking tool videos / Cheatsheet

Shotcraft · 2026-09-22 · https://shotcraft.video/prompts/cooking-tool-video-prompts/

Original starting points, not tested generation results. Adapt them to your model and inspect the output.

Plan before generating

Lock product references, brand materials and colours, camera action, start/end states and the destination crop. Choose native audio only when supported; otherwise script a separate voiceover. Add exact titles and logos in post.

A prompt to adapt

Frame a matte charcoal gooseneck kettle in profile beside a ceramic coffee dripper on a stable server. A hand grips the handle and gently tilts the kettle, sending a narrow continuous stream from the spout into the filter. Keep the camera still so the arc and landing point remain readable. Soft side light traces the spout against a warm grey background. Show the stream diminishing as the kettle returns upright. Retain natural skin, chalk ceramic and restrained metal highlights.

Sequence

Introduce preparation: Cut after the peel lands.

Show cooking contact: Cut to the later cooking stage; do not imply peeling instantly creates cooked slices.

Close with controlled movement: Introduce the separate coffee task and finish as the stream stops.

Before accepting a take

Check product geometry and condition, hands and contact, reference identity, light and reflections, neighbouring joins, intelligible audio and crop. An attractive generated result is not proof of performance.

Other prompts in the full guide

Follow the kettle pour; A pan doing its work; Make peeling legible
